

## A Reasoned Voice Transforming America's Understanding of Stem Cell Research

# Yvonne Perry

*Author, freelance writer and public speaker challenges readers to think for themselves rather than accept the opinion of political or religious leaders.*

Yvonne Perry is a freelance writer, author and speaker who writes about educational topics that inspire excellence and uplift the spirit. Her style of writing is lovingly controversial and challenges people's belief systems in order to help them move past what she calls "Sunday School mentality." She is a graduate of American Institute of

Holistic Theology where she earned a Bachelor of Science in Metaphysics.

The information in her book ***Right to Recover: Winning the Political and Religious Wars over Stem Cell Research in America*** was derived from intensive research, personal interviews, emails and other correspondence with national and international medical doctors, research scientists, religious leaders and elected officials as well as stories from patients, who hope to transform their lives through stem cell implants.

The book contains well-researched facts about all types of stem cell (bone marrow, amniotic and cord blood) treatments presently being used and their restorative effects. It also explores the research being done using stem cells derived from in-vitro fertilized eggs on laboratory animals and presents findings to support its curative potential on humans.

## Story Angles

**Stem Cell Research Education:** The basics of the science of stem cell research, in-vitro procedure, and cloning. There are four reasons why all types of stem cell research should be pursued to find treatment and possibly cures for illnesses. Learn the facts about days-old blastocysts and the possibility these cells hold. Discover why a fish-looking embryo cannot possibly exist in a Petri dish. Understand the difference between conception and fertilization.

**Biblical Support for Embryonic Stem Cell Research:** Yvonne is dedicated to helping people of faith understand the incredible gift the Creator has given humanity through blastocystic (embryonic) stem cell research. In her attempt to educate the public and lawmakers about this science she uses Biblical references to demonstrate why stem cell research of any kind is of God, not *against* God.

**Religion—No Place in Government:** America was not founded upon Christianity or any other religion. Our founding fathers intended for there to be a separation of Church and State. There are religious groups who use their power to convince everyone that blastocyst stem cells have less potential than adult stem cells. These groups believe that an embryo is killed as a result of stem cell research. Learn the truth about blastocystic stem cell research and the schemes used by ultra conservative religious right groups to sidetrack federal funding for blastocystic stem cell research.
